IN THE CLAIMS

Please amend the claims as follows:

1.   (Currently Amended) A system for providing downloadable subscription-based software to one or more wireless devices, comprising:

one or more wireless devices, each wireless device in ~~selective~~ communication with a wireless network and ~~selectively~~ downloading one or more subscription-based software applications to be executable on the wireless device, and each wireless device ~~selectively~~ transmitting subscription-based application deletion data for any downloaded subscription-based application that has been deleted by the wireless device, wherein each wireless device is configured to transmit voice communication from a user to the wireless network;

one or more application download servers, each application download server ~~selectively~~ communicating with the one or more wireless devices across the wireless network and downloading to the wireless devices at least one subscription-based software application, each application download server generating subscription-based application download data for each subscription-based software application downloaded by a wireless device therefrom; and

an accounting module to account for the use of subscription-based software applications by each wireless device, the accounting module receiving subscription-based application download data from the one or more application download servers and subscription-based application deletion data from each wireless device, and wherein the accounting is based upon the subscription-based software application download data and subscription-based application deletion data.

2.   (Original) The system of claim 1, wherein the accounting module is resident on the application download server from which a subscription-based software application was downloaded.

2

3.   (Original) The system of claim 1, wherein the accounting module is resident on an application download server.

4.   (Original) The system of claim 1, wherein upon deletion of a subscription-based software application, the wireless device bridges a communication link with the one or more application download servers and transmits subscription-based application deletion data to the one or more application download servers.

5.   (Original) The system of claim 4, wherein the one or more application download servers receive subscription-based application deletion data from a wireless device and send the subscription-based application deletion data to the accounting module.

6.   (Currently Amended) The system of claim 5, wherein the accounting module ~~selectively~~ receives subscription-based application deletion data transmitted from the one or more download servers.

7.   (Original) The system of claim 1, wherein the accounting module receives subscription-based application deletion data directly from a wireless device that has deleted a subscription-based application.

8.   (Original) The system of claim 1, wherein the wireless device is a cellular telephone.

9.   (Original) The system of claim 1, wherein the wireless device is a personal digital assistant.

10.   (Original) The system of claim 1, wherein the wireless device is a pager.

3

11.   (Currently Amended) A system for providing downloadable subscription-based software across a wireless network, comprising:

wireless communication means for ~~selectively~~ communicating with the wireless network and ~~selectively~~ downloading one or more subscription-based software applications to be executable on the wireless communication means, the wireless communication means ~~selectively~~ transmitting subscription-based application deletion data for any downloaded subscription-based application that has been deleted by the wireless communication means, <u>wherein the wireless communication means includes a wireless device configured to transmit voice communication from a user to the wireless network;</u>

application download means for ~~selectively~~ communicating with the wireless communication means across the wireless network and downloading at least one subscription-based software application thereto, each application download means generating software application download data for each subscription-based software application downloaded to a wireless communication means therefrom; and

an accounting means for accounting for the use of the subscription-based software application by the wireless communication means, the accounting means receiving subscription-based software application download data from the application download means and subscription-based application deletion data from the wireless communication means, and wherein the accounting is based upon the subscription-based application download data and subscription-based application deletion data.

12.   (Currently Amended) A method for providing downloadable subscription-based software on one or more wireless devices in selective communication with one or more application download servers across a wireless network, the method comprising the steps of:

~~selectively~~ downloading one or more subscription-based software applications from an application download server to a wireless device, the downloaded subscription-based software applications executable on the wireless device, <u>wherein the wireless</u>

4

device is configured to transmit voice communication from a user to the wireless
network;

generating at the application download server subscription-based application
download data for each subscription-based software application downloaded by a wireless
device therefrom;

~~selectively~~ transmitting subscription-based application deletion data from each
wireless device that has deleted a subscription-based software application to an
accounting module; and

accounting for the use of subscription-based software applications by each
wireless device on the accounting module, the accounting based upon the subscription-
based software application download data and subscription-based application deletion
data.

13. (Original) The method of claim 12, wherein the step of accounting for the
use of subscription-based software applications by each wireless device occurs on an
accounting module resident on the application download server from which a
subscription-based software application was downloaded.

14. (Original) The method of claim 12, wherein the step of accounting for the
use of subscription-based software applications by each wireless device occurs on an
accounting module resident on an application download server.

15. (Currently Amended) The method of claim 12, further comprising the step
of, prior to the step of ~~selectively~~ transmitting subscription-based application deletion
data from each wireless device, the wireless device bridging a communication link to the
one or more application download servers after the wireless device has deleted a
subscription-based software application.

5

16.   (Original) The method of claim 12, wherein the step of accounting for the use of subscription-based software applications by each wireless device occurs on an accounting module located remotely from the one or more application download servers.

17.   (Original) The method of claim 16, further comprising the steps of receiving the transmitted subscription-based application deletion data at an application download server and sending the subscription-based application deletion data to the accounting module.

18.   (Currently Amended) The method of claim 16, wherein the step of ~~selectively~~ transmitting subscription-based application deletion data from each wireless device to an accounting module is ~~selectively~~ transmitting subscription-based application deletion data from each wireless device directly to the accounting module located remotely from the one or more application download servers.

19.   (Currently Amended) A method for providing downloadable subscription-based software on one or more wireless devices in selective communication with one or more application download servers across a wireless network, the method comprising the steps of:

a download step for ~~selectively~~ downloading one or more subscription-based software applications from an application download server to a wireless device, the subscription-based software applications executable on the wireless device, wherein the wireless device is configured to transmit voice communication from a user to the wireless network;

a subscription-based application download data generation step for generating at the application download server subscription-based application download data for each subscription-based software application downloaded by a wireless device therefrom;

a subscription-based application deletion data transmission step for ~~selectively~~ transmitting subscription-based application deletion data from each wireless device that has deleted a subscription-based software application to an accounting module; and

6

an accounting step for accounting for the use of subscription-based software applications by each wireless device on the accounting module, the accounting based upon the subscription-based software application download data and subscription-based application deletion data.

20.   (Currently Amended) An accounting module for accounting for the use of subscription-based software applications by one or more wireless devices in selective communication with one or more application download servers across a wireless network, wherein each wireless device ~~selectively~~ downloads from an application download server one or more subscription-based software applications to be executable on the wireless device and each wireless device that has deleted a subscription-based software application ~~selectively~~ transmits subscription-based application deletion data to the accounting module, and each application download server generates application download data for each subscription-based software application downloaded by a wireless device therefrom, and wherein the accounting module receives subscription-based application download data from the one or more application download servers and subscription-based application deletion data from the one or more wireless devices, and accounts based upon the subscription-based application download data and the subscription-based application deletion data, wherein each wireless device is configured to transmit voice communication from a user to the wireless network.

21.   (Original) The accounting module of claim 20, wherein the accounting module is resident on an application download server.

22.   (Original) The accounting module of claim 20, wherein the accounting module is located remotely to the one or more application download servers.

23.   (Original) The accounting module of claim 22, wherein the accounting module receives the subscription-based application deletion data from the one or more application download servers.
